

TABOO: DEPOPULATION

Ricardo Beas -- April 2012

In the conspiracy world there are many theories on certain historical events with many different explanations as to why something happened. To discern between those that may be correct and those that are some sort of exaggeration or a flat out lie is indeed a difficult task and what we ultimately end up believing are our own very personal conclusions, based on facts, or often just on beliefs. Not all conspiracists believe in the same things, they might only agree on some.

Some beliefs are so out-there and risky to mention in conversation with others that often even those that believe it don't mention it because of fear of ridicule, as well as damage to reputation and other financial or legal consequences. Probably the most incredible one to believe is the one that states that not only do the people that presumably control the world want to limit the size of the population of the world, but that they also plan to exterminate millions to reach a controllable number of human beings. Present population for the world: seven billion.

My last blog on Chemtrails (*chem* as in chemicals, of course) and the related video addressed the issue of whether there was a deliberate international effort to spray something at high altitudes to impact vegetation and inevitably humans, mostly stating that most likely it is being done for some financial gain for those ordering it done.

There was also a comment in the video that maybe such spraying could also have to do with depopulation. Now this is definitely a hard one to swallow, even for me, and you have a pretty good idea of my own personal beliefs, yet everything is worth considering (as a *told Bab*, *in pari materia*, how some things relate to others).

This is a huge subject and I would have to do a lot of research to show comments from recognized sources regarding the many aspects of population control, but being that this theory of depopulation moves mostly in the deep core of the New World Order conspiracy realm I will approach it from there and will share some videos seeing it from that perspective. The first video is related to the Georgia Guidestones and the others regarding the Denver International Airport, as odd as this may seem.

The third and fourth videos were definitely made by someone who truly believes that there is genocide planned for our planet and they make many assertions for which they don't provide any proof to back them and throws some wild theories as facts. They also made the video in a somewhat theatrical manner, but if you can put all that in the backburner of your own interpretation and can just look at some of facts presented, in particular the murals in the airport, it does leave you thinking if anyone can be so evil? My God, I hope not! Click below to see the videos.

Could it be true that ... *we are being dumb down, made sicker and made infertile?*

Our US federal science czar, John Holdren, co-authored the 1977 book "EcoScience, Population, Resources, Environment," where the following is recommended:

- Women could be forced to abort their pregnancies, whether they wanted to or not;
- The population at large could be sterilized by infertility drugs intentionally put into the nation's drinking water or in food;
- Single mothers and teen mothers should have their babies seized from them against their will and given away to other couples to raise;
- People who "contribute to social deterioration" (i.e. undesirables) "can be required by law to exercise reproductive responsibility" -- in other words, be compelled to have abortions or be sterilized.
- A transnational "Planetary Regime" should assume control of the global economy and also dictate the most intimate details of Americans' lives -- using an armed international police force.

[Click here for details.](#)

When you add to the above all that is known about vaccines, what they contain, that they are causing an alarming increase in autism, expected to reach 1 out of 2 people by 2033, 80% of them male; plus you add toxic clandestine geoengineering and toxic GMO's to the mix, it is almost inevitable but to conclude that a depopulation plan is being pursued. I highly recommend the movie "Bought" by Jeff Hays Films which covers vaccines and GMOs, [click here to view.](#)

For those that might think that the supposed responsible people would never do that to themselves, just think of all the nuclear tests. In fact, in 1962, under Project Starfish, the US Defense Dept. exploded a large nuclear explosive device 250 miles above Earth; which destroyed atmospheric ozone, tore a temporary hole in Earth's protective ionosphere. The government has never released the full results of the test.

Definitely, there is a bunch of stuff out there in the internet. But that will be another subject.

Ricardo Beas
